Foreword

WITH THE enactment of Medicare, utilization review became a national requirement for third-party reimbursement of certain health care costs. The 1972 Amendments to the Social Security Act authorized the establishment of Professional Standards Review Organizations (PSRO's), which will be responsible for assuring that services furnished by or in institutions are medically necessary, are provided in accordance with recognized professional standards of care, and are furnished in the most efficient and economical manner consistent with quality care. To aid in studying these utilization patterns, national and regional data were published for 1969 on the number of Medicare discharges from short-stay hospitals, the mean and median length of stay and percentile distribution of days of care for selected diagnoses. This report presents similar data for discharges in 1970. For each diagnosis, data are presented for selected patient characteristics: age, the presence of secondary or complicating conditions, and whether or not surgery was performed.

This report was prepared in the Division of Health Insurance Studies of the Office of Research and Statistics in the Social Security Administration, under the supervision of Howard West, Director, and Aaron Krute, Deputy Director, Program Statistics. Text preparation was the responsibility of Penelope L. Pine of the Program Statistics Staff. Contributions to the tabulation and presentation of the statistical content of this report were made by Winston O. Edwards of Management Statistics and Robert M. Dickerson of Data Management.

The General Tables were produced by the "System for Automated Tabular Composition," a computer system at the Social Security Administration Headquarters in Baltimore, Maryland. They were set on Linotron equipment at the Government Printing Office in Washington, D.C.

Discharges from Short-Stay Hospitals for Selected Diagnoses and Patient Characteristics, 1970

Introduction

The hospital insurance (HI) part of the Medicare program, effective July 1, 1966, has been providing payment for a large portion of the costs of inpatient hospital services for the insured population aged 65 and over. In calendar year 1971, for example, Medicare reimbursements for inpatient care in short-stay hospitals totalled almost \$5.0 billion and represented more than three-fourths of the charges billed to the program for such services.

This report presents tables showing length of stay distributions for selected diagnoses by census region and division for Medicare patients discharged from short-stay hospitals during 1970 (see Notes to General Tables for composition of geographic areas). For each diagnosis, data are reported by selected patient characteristics, including age, the presence or absence of additional (complicating) conditions, and whether or not surgery was performed (see Notes preceding General Tables). These factors as well as the disease, illness, or injury that was the primary cause of a person's hospitalization are important in determining length of stay and, as a result, benefit payments under Medicare.

The report presents data for 139 specific diagnoses or diagnostic groups, representing 4.65 million stays for inpatients discharged from short-stay hospitals under Medicare during 1970. The figures reported were selected from some 5.5 million total discharges entered in the Social Security Administration's central records at the time the data were tabulated. Table A below summarizes the length of stay experience under Medicare for the United States and census regions of the total 5.5 million discharges recorded.

Source and Limitations of Data

The data in this report are derived from bills for inpatient services submitted for payment by short-stay

hospitals for a 20-percent sample of Medicare beneficiaries. The data include all discharges, that is, patients discharged alive as well as those who died during hospitalization or who were transferred to other facilities. The number of reported discharges is greater than the actual number of persons discharged during the year because a person could have more than one stay during the reporting period.

When a beneficiary is hospitalized, an admission notice and subsequent bills are received by the Social Security Administration (SSA) where they are processed and placed on file. Part of this process consists of coding medical information on the bills in the statistical sample to identify the disease, illness, condition or injury responsible for the hospitalization. Information from the billing forms is matched to other master records maintained by SSA, which contain information about the characteristics of each Medicare beneficiary as well as individual short-stay hospitals participating under Medicare. General and special hospitals reporting average stays of less than 30 days are included.

The data in this report are based on a sample of the approximately 5.5 million discharges from short-stay hospitals during 1970 which were recorded in SSA by January 1972. The sample counts have been multiplied by five to give an estimate of the total number of discharges recorded as of this date. There is a lag between the time a person is discharged from a hospital and the time this information is received by SSA and posted to central records. Therefore, the counts for this report understate the total number of discharges for each diagnosis. An additional small number of discharges were also excluded, i.e., emergency admissions to hospitals not participating in the Medicare program and those for which the hospital stay was over 90 days in duration.

Table A: Number and percent of discharges from short-stay hospitals and the average length of stay and standard deviation for selected patient characteristics, by census region, 1970

A complete count of Medicare discharges from short-stay hospitals in 1970 would be about 5.93 million, 9 percent more than the total figure used in this study. It is assumed that this difference has no significant effect on the data. Discharges for which the hospital stays were over 90 days totalled about 20,000 and represented about three-tenths of 1 percent of all discharges reported. They accounted for over 2.6 million days of care, and would have raised the national average length of stay by about four-tenths of a day. The data shown by geographic division were summarized by address of the hospital, not residence of the beneficiary. Included in the totals are the 50 States and the District of Columbia.

The data in this report are estimates derived from a sample of bills and therefore are subject to sampling variability. Smaller numbers in table cells are generally subject to greater variability than larger estimates. Where the number of cases in the sample was judged too small to be reliable, an asterisk appears in place of the estimate in the table. Both standard deviations and percentiles are provided to give some indication of that variability. The standard deviation measures the variability (dispersion) of the distribution of individual lengths of stay around the mean. For a normal distribution, we would expect 68 percent of the cases to fall within (plus or minus) one standard deviation of the mean. One should note that the value of the standard deviation may be influenced by extreme values of the distribution, while the value of percentiles is influenced primarily by the shape of the distribution and only to a limited extent by its extreme values. In this report, the standard deviation is computed on the basis of the sample data.

Coding of Diagnoses

Participating hospitals use standard billing forms (SSA-1453, figure 1) to identify the beneficiary and specify the services rendered during the stay. The billing form includes a space for the entry by the hospital of a detailed description of the patient's primary diagnosis at the time of discharge. Space is also provided for the entry of any secondary diagnoses. The name and date of any surgical procedure performed during the hospital stay is also recorded.

The primary discharge diagnosis on each bill in the 20-percent sample is coded using the International Classification of Diseases Adapted — Seventh Revision (ICDA-7).¹ Four-digit codes are assigned for each primary diagnosis. If more than one diagnosis appears on the bill and there is no indication of which diagnosis is primary, the first diagnosis listed is coded. The only exception to this rule is when a symptom or ill-defined condition is listed first. In this case preference is given to the more substantive diagnosis appearing second. The presence or absence of additional diagnoses is indicated by a one-digit code.

Medical coding is done by personnel of the Social Security Administration who have completed special training in anatomy and medical terminology and the use of the statistical coding manuals. Also, review of the coding is performed with the assistance of skilled personnel including medical record technicians and registered record librarians.

FORM SSA-1453(5) (1-70)

FD-13 SSA-28

Department of Health, Education, and Welfare Social Security Administration

PROVISIONS OF THE LAW

THE HEALTH INSURANCE program for the aged, commonly called Medicare, was enacted on July 30, 1965 as Title XVIII of the Social Security Act, and became effective on July 1, 1966. The program makes available two separate but coordinated insurance coverages—hospital insurance, covering nearly all persons aged 65 and over, and supplementary medical insurance, covering those persons in this age group who enroll voluntarily and pay the premium.

Hospital Insurance Program

The hospital insurance program (Part A of Medicare) pays for part of the costs of inpatient hospital and related post-hospital services. It is financed on a self-supporting basis through a tax on a portion of current earnings, paid by employees, employers, and self-employed persons. The proceeds of this tax are placed in the Hospital Insurance Trust Fund for payment of benefits and administrative expenses incurred under the program. General tax revenues are used to defray the costs of providing coverage for persons who qualify for hospital insurance but who are not eligible for monthly social security or railroad retirement benefits.

BENEFITS

Inpatient hospital benefits.—The program pays for up to 90 days of covered services in a participating hospital in a “benefit period” (a period beginning with the first day of hospitalization and ending 60 days after discharge from a hospital or a skilled nursing home). Full payment is made for the first 60 days of hospitalization after a deductible of \$52 has been paid. For each of the remaining 30 days in the benefit period, the patient pays a coinsurance amount of \$13 a day.

Each hospital insurance beneficiary also has a “lifetime reserve” of 60 additional hospital days, subject to a copayment of \$26 a day. These additional days can be used at the patient’s option whenever the 90 days covered in a benefit period are exhausted.

The program also pays for emergency services in a nonparticipating hospital. Each nonparticipating hospital providing emergency services elects whether to bill the program or to charge its patients directly. If they bill the program, they are reimbursed on the basis of reasonable costs of covered services rendered. If they bill the patient, he pays the bill and submits the itemized bill to SSA for reimbursement. The

reimbursement paid is 60 percent of reasonable charges for room and board and 80 percent of the charges for ancillary services.

Inpatient tuberculosis and psychiatric hospital services are also covered. However, there is a lifetime limit of 190 days of care in a psychiatric hospital. Where an individual is a patient in a participating psychiatric hospital at the time he becomes entitled to hospital insurance, the number of days he was such an inpatient in the 150-day period immediately prior to his eligibility are deducted from his days of entitlement in that benefit period but not from the lifetime limitation.

Covered hospital services include room and board in accommodations containing from two to four beds, nursing services (except for private-duty nursing), drugs and biologicals, and all those services ordinarily furnished by a hospital to its inpatients. The hospital insurance program does not cover the services of physicians (including radiologists, anesthesiologists, pathologists and physiatrists) except for services provided by interns or residents in training under approved teaching programs in a hospital.

The cost of the first three pints of blood (or equivalent amounts of packed red blood cells) furnished a patient during a benefit period is also deductible unless the patient arranges for replacement. Charges for any additional blood are covered under the program.

Post-hospital home health care benefits.—These benefits cover the cost of visiting nurse services and related home health services for as many as 100 visits in the year following the patient’s most recent discharge from a hospital or participating extended care facility, provided he has been confined for at least 3 consecutive days in a hospital. A home health plan must be developed by a physician and implemented within 14 days after the patient’s discharge from the hospital or extended care facility. The home health care must be for further treatment of a condition for which he received services in the hospital or extended care facility.

Extended care facility benefits.—The program pays for the reasonable cost of all covered inpatient services in participating extended care facilities (ECF) for up to 100 days in any benefit period. Benefits are payable only following discharge from a hospital after a stay of 3 consecutive days or more, and admission to an ECF within 14 days of discharge. Full payment is made for the first 20 days. For each of the remaining 80 days, the patient pays a coinsurance amount of \$6.50 a day. (The extended care coinsur-

ance amount is set by law as one-eighth of the inpatient hospital deductible.)

Supplementary Medical Insurance Program

The supplementary medical insurance program (Part B of Medicare) covers physicians' services, outpatient hospital services, additional home health services, other medical services and supplies, and outpatient physical therapy. Individuals 65 years of age and over may enroll in the program regardless of whether they are eligible for social security retirement benefits by paying monthly premiums which are matched by the Federal Government and paid into the Supplementary Medical Insurance Trust Fund for payment of benefits and administrative expenses incurred under the program.

BENEFITS

The SMI program pays for 80 percent of the allowed charges for covered physician services and other medical services after the patient has met a deductible of \$50 during a calendar year. For outpatient care and home health services, the program pays 80 percent of reasonable costs after the deductible has been met. Payment for outpatient psychiatric physician services is limited to the lesser of \$250 or 50 percent of the allowed charges in any year after the \$50 deductible has been met. The sum and percentage are derived from the statutory provision which permits an incurred expense for out-of-hospital treatment of mental illness of only \$312.50 or 62.5 percent of actual expenses in a calendar year. Since only 80 percent of allowed charges can be reimbursed, the effective maximum becomes \$250.

To preclude the possibility of having to meet a deductible twice in a short period of time, a "carryover" provision is applied. Accordingly, covered expenses that are incurred in the last quarter of the year and counted toward the deductible in that year are also credited toward the deductible for the following year. However, the provisions concerning the deductible and the coinsurance do not apply to the services of radiologists and pathologists furnished to hospital inpatients. "Reasonable" charges for such services are completely reimbursed.

The SMI program pays for physicians' services, including home, hospital, and office visits; services and supplies, including drugs and biologicals that cannot be self-administered, that are furnished as a part of a physician's professional service; diagnostic X-ray tests, diagnostic laboratory tests, and other diagnostic tests; X-ray; radium, and radioactive isotope therapy, including materials and the services of technicians; surgical dressings, splints, casts, and other devices used for reduction of fractures and dislocations; purchase or rental of durable medical equipment, in-

cluding iron lungs, oxygen tents, hospital beds, and wheelchairs used in the patient's home (including an institution used as his home); ambulance service where the use of other methods of transportation is contraindicated by the individual's condition; prosthetic devices (other than dental) that replace all or part of an internal organ; leg, arm, back, and neck braces; artificial legs, arms, and eyes, including replacement if required because of a change in the patient's physical condition; and 100 home health visits during a calendar year, independent of those provided under the hospital insurance program.

Also covered are hospital services incident to physicians' services rendered to outpatients, and outpatient physical therapy services.

Eligibility

The hospital insurance program.—Almost all persons aged 65 and over are eligible for benefits under the hospital insurance program. Included are those persons in this age group who are entitled to monthly social security cash benefits or payments from the railroad retirement system, regardless of whether they have applied for these cash benefits. During 1970, a person could apply for hospital insurance protection even though he did not qualify for either social security cash benefits or a railroad retirement annuity if (1) he had attained age 65 before 1968, or (2) he would attain age 65 after 1967 with not less than three quarters of social security coverage, whenever acquired, for each calendar year elapsing after 1966 and before the year in which he would attain age 65. However, hospital insurance protection could not go into effect until the individual attained age 65. These two classes of individuals were "deemed insured" under a special transitional provision.

For persons who reach age 65 after 1968, the amount of work credits needed increases by three quarters each year—six quarters are needed by those who reached age 65 in 1969, nine by those who reach 65 in 1970, and so on. However, a person who qualifies for monthly benefits as the dependent or survivor of an insured worker does not need any work credits.

Employees who retired from the Federal Civil Service after July 1, 1960, and who had the opportunity to be covered under the Federal Employees Health Benefits Act of 1959, are ineligible for hospital insurance benefits under the transitional provisions. Also ineligible are aliens with less than 5 years of continuous residence in the United States, and those persons convicted of crimes against the security of the United States.

Hospital insurance protection can be retroactive for as many as 12 months before the month an individual files his application for entitlement. For example, an individual may apply 11 months after he attains age 65 and still be entitled to benefits from the month he attained age 65.

Supplementary medical insurance.—Persons entitled to benefits under the hospital insurance program (Part A), retired Federal employees and persons not eligible for hospital insurance under the transitional provisions may voluntarily participate in the SMI program.

Enrollment.—Individuals may enroll in the SMI program only during specified periods—the initial and the general enrollment periods. The initial enrollment period begins with the third month preceding the one in which an individual attains age 65 and ends 3 months after the month of attainment, a total period of 7 months. If he enrolls during the 3 months prior to the month in which he attains age 65, his coverage is effective with the month in which he attains age 65; if he enrolls during the month he attains age 65, his coverage begins the following month; if he enrolls in any of the 3 months after he attains age 65, his coverage begins from 2 to 3 months after enrollment, depending on how long he waited before enrolling.

The most recent general enrollment period was set between January 1, 1970, and March 31, 1970, for those who did not enroll in their initial enrollment period, or who having terminated their enrollment now wished to reenroll. Comparable periods are set to occur in every year. A person who enrolls during a general enrollment period may receive benefits starting on the first of July following the general enrollment period. An eligible individual must enroll within 3 years after the end of his initial enrollment period or within 3 years after termination of prior enrollment.

A State may enroll otherwise eligible individuals who receive cash payments under public assistance programs if the State requests that a State-Federal enrollment agreement be established and pays the necessary premiums.

Enrollment terminates with the beginning of the month following the month of death. Up to April 1, 1968, railroad retirement beneficiaries and individuals entitled to monthly cash social security benefits could terminate their enrollment voluntarily by notifying the Social Security Administration in writing during a general enrollment period of the desire to withdraw from the program. Under the 1967 amendments effective April 1, 1968, beneficiaries may give notice of withdrawal at any time and their coverage will be terminated at the close of the following calendar quarter. Other enrolled persons may terminate their coverage by withholding payment of premiums or by notifying the Social Security Administration in writing of the desire to withdraw from the program. The enrollee is provided a 90-day grace period for the payment of overdue premiums after which coverage is automatically terminated. An individual who previously has terminated his enrollment may reenroll only in a general enrollment period beginning within 3 years of the date his previous enrollment had terminated. Reenrollment, however, is allowed only once.

Financing the Program

Hospital insurance.—The hospital insurance program is financed on a long-range, self-supporting basis through a separate schedule of increasing tax rates on the first \$7,800 of earnings in employment covered under the Social Security Act. The same tax rate applies to employees, employers, and self-employed persons. This rate was 0.60 percent for 1968–1972, and is scheduled to increase until it is 0.90 percent in 1987 and thereafter. The proceeds of this tax and that collected from the railroad retirement system are placed in a Hospital Insurance Trust Fund from which reimbursement for all benefits and administrative expenses incurred under the hospital insurance program is made. The Hospital Insurance Trust Fund is reimbursed from general tax revenues for the cost of providing coverage for the almost 2½ million persons who qualify for hospital insurance under the transitional provisions.

Supplementary medical insurance.—Premiums are paid into the Supplementary Medical Insurance Trust Fund by those persons enrolled for supplementary medical insurance (or on their behalf), and a matching amount is paid from general revenues by the Federal Government.

The premiums of persons receiving social security cash benefits, railroad retirement, or Federal civil service annuities are deducted from their monthly benefit checks. Persons not receiving monthly benefits are billed quarterly for premiums by the Social Security Administration or the Railroad Retirement Board and have a 90-day grace period in which to make payment. Premiums may be paid for as long as a year in advance, and for individuals financially unable to make quarterly payments, arrangements can be made for monthly payments.

The monthly premium during 1969 and the first half of 1970 was \$4 a month. The premium rate of the supplementary medical insurance program may be adjusted annually if medical costs rise. Beginning July 1970, it was raised to \$5.30 a month.

As previously noted, States are permitted to pay the medical insurance premiums for public assistance recipients aged 65 or over who were receiving money payments under an approved public assistance plan and for all aged persons eligible to receive medical assistance under an approved Title XIX plan.

Administration of the Program

Hospital insurance.—Under the hospital insurance plan, groups or associations of providers, on behalf of their members, may nominate a national, State, or other public or private agency or organization to serve as intermediary in the claims process. A member of an association is free, however, to receive payment from an approved intermediary other than its

association's nominee, if approved by the Secretary and agreeable to the intermediary selected. In addition, a provider may deal directly with the Social Security Administration.

The Secretary may enter into an agreement with a nominated organization if he finds this to be consistent with effective and efficient administration of the hospital insurance program. The intermediary makes payments to providers for covered items and services on the basis of reasonable cost determinations and assists in the application of safeguards against unnecessary utilization of covered services. The agreement may also call for (1) furnishing consultative services to assist providers to establish and maintain necessary fiscal records and otherwise qualify as providers of services, (2) serving as a center for communicating with providers, and (3) making audits of provider records. Hospital insurance intermediaries also make payments for home health and outpatient hospital services covered under medical insurance.

Requests for payment for covered services must be signed by the beneficiary (or someone for him, if he is unable to do so). Payments are made on the basis of reasonable costs for these services to participating providers of services, that is, hospitals, extended care facilities, and home health agencies, that have been certified for participation.

In some instances, hospitals may bill for physician services rendered to inpatients. In these cases, payment is made by the Part A intermediary. Depending on the nature of the billing, funds are transferred from the SMI trust fund to the HI trust fund to cover the cost of these services, or are paid directly from the SMI trust fund.

The intermediary selected by the provider reviews the claims for payment and pays the provider. Actual payment is made on the basis of an interim rate established between the provider and the intermediary. Final settlement based on each provider's operating year is made on the basis of a cost report submitted by the provider, and subject to an independent audit.

No payments can be made to Federal facilities except for emergency services, unless the provider serves as a community institution. In addition, payment cannot be made to a provider for those services it is obligated to render at public expense under Federal law or contract.

Supplementary medical insurance.—Under the medical insurance program, the Secretary may enter into contracts with carriers for the performance of specified administrative functions. The carriers' principal function is to determine whether charges are allowable (reasonable) and to make payment.

The carrier selected by the Secretary determines the allowed charges for bills submitted for each medical care service covered by the program and pays 80 percent of this amount after the \$50 deductible has been met.

The allowed charge for the service may be paid to the patient, or the patient may assign the bill for

collection to the physician or other supplier of the service, if he is willing to accept assignment. In the former situation, the patient submits an itemized bill to the carrier and is reimbursed; in the latter, the physician or other supplier submits the bill and is reimbursed. When the payment is made directly to the physician (or supplier) on assignment, the allowed or reasonable charge determined by the carrier is the total charge. In both situations, the patient is responsible for the first \$50 of the charges for covered services he receives during the year and the amount of the bill over 80 percent of the allowed charges.

The law instructs the carrier to consider the following criteria in determining the "allowed" charge:

- (1) the customary charge for the service generally made by the physician or other person furnishing such services; and
- (2) the prevailing charge in the locality by other physicians and suppliers for similar services. The upper limit of the prevailing charge was set at the 83d percentile of the weighted customary charge.

The law also specifies that the "allowed" charge cannot be higher than the charge applicable for the similar service rendered under comparable circumstances to the carriers' own policy holders or subscribers. For 1970, carriers were instructed to maintain allowed charges at the levels existing before 1969.

Carriers also have the authority and responsibility to determine, in a given case, whether a claim is for a covered service and to deny claims for noncovered or excluded items or services. In addition, carriers are to assist in the application of safeguards against unnecessary utilization of services furnished eligible individuals.

Most services covered by the medical insurance program are rendered on a fee-for-service basis. However, services furnished under group practice prepayment plans are normally rendered in return for predetermined premium payments. In recognition of the need for special adaptation of the Medicare payment procedures for services rendered by group practice prepayment plans, the law provides that an organization which furnishes medical and other health services (or arranges for their availability) on a prepayment basis, may elect to be paid 80 percent of the reasonable cost of services in lieu of 80 percent of the allowed charge for such services.

The 1967 amendments to the Social Security Act introduced a time limit on filing of claims. For bills incurred in the supplementary medical insurance portion of the program after March 1968, claims must be filed no later than the close of the calendar year following the year in which the services are furnished. For services provided during the last 3 months of the calendar year, bills may be submitted through the end of the second year following.

General Tables

Notes

Health Insurance for the Aged: The program, commonly known as Medicare, that pays for part of the costs of hospital and medical services for participating persons aged 65 and over.

Short-stay hospital: General and special hospitals certified as participating facilities under Medicare and reporting average lengths of stay of less than 30 days.

Discharge: The formal release of an inpatient from a hospital. Includes those persons who died during their hospitalization.

Length of stay: The number of days of care for a discharge. The day of discharge is not counted as a day of care. A hospitalization of less than 1 day (i.e., the patient is admitted and discharged on the same day) is counted as 1 day.

Primary discharge diagnosis: The illness, condition, or injury recorded on the patient's billing form by the hospital as the primary diagnosis at the time of discharge. This diagnosis is coded using the International Classification of Disease, Adapted, Seventh Revision.

Age of patient: The number of completed years at last birthday in month of admission to the hospital.

Percentile: The 10th, 25th, 50th, 75th, and 90th percentiles of stay are presented. The 50th percentile is the median of the distribution. That is, half of the stays fall above and below the median of the distribution. The meaning of the percentiles can be illustrated by example: if the 10th percentile for a group of discharges is 2 days, it can be defined as 10 percent of the discharges stay 2 days or less.

With surgery: A discharge is considered to involve surgery if it involved any operative procedure classified as such according to the *Current Procedural Terminology*, first edition, American Medical Association, Chicago, Illinois, 1966. Surgery includes procedures

involving incision, excision, amputation, introduction, endoscopy, repair, destruction, suture, or manipulation.

Without surgery: All other discharges.

Geographic classifications: Based on the address of the hospital.

United States: Consists of the 50 States, and the District of Columbia, grouped in 9 Census Divisions, which are regrouped into 4 Census Regions.

Census Regions: Northeast, North Central, South, West.

Census Divisions: Northeast - New England, Middle Atlantic.

North Central - East North Central, West North Central.

South - South Atlantic, East South Central, West South Central.

West - Mountain, Pacific.

States included in each division: New England - Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut.

Middle Atlantic - New York, New Jersey, Pennsylvania.

East North Central - Ohio, Indiana, Illinois, Michigan, Wisconsin.

West North Central - Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, Kansas.

South Atlantic - Delaware, Maryland, District of Columbia, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida.

East South Central - Kentucky, Tennessee, Alabama, Mississippi.

West South Central - Arkansas, Louisiana, Oklahoma, Texas.

Mountain - Montana, Idaho, Wyoming, Colorado, New Mexico, Arizona, Utah, Nevada.

Pacific - Washington, Oregon, California, Alaska, Hawaii.
